

Network analyzers to monitor the main electrical measurements (TRMS) in single-phase or three-phase systems with or without neutral with balanced and unbalanced load.

- Instrument to measure:
 - Voltage (TRMS) (chained and phased)
 - Current (TRMS)
 - Active, reactive and apparent power
 - Active and reactive energy
 - Frequency
 - Power factor ($\cos \varphi$)
 - Phase angle

ADR THREE-PHASE WITH RS-485 SERIAL OUTPUT

- Possibility to view the system measurements and the maximum value recorded by the system measurement
- Storage of the peak values and related timing linked to the current timer
- Power supply: 230 V AC 50/60 Hz
- Backlit LCD display with 3 numeric fields
- Possibility of earthing the secondary circuits of the CT
- CT and VT ratios selectable directly during programming
- Active energy meter zeroing
- Reactive energy meter zeroing
- ON/OFF or timed backlight management
- RS-485 output for data communication with the possibility to view and file the measurements (ADR-view)
